echics to b	Description New York Country of the	
zen.	You are competing in a basketball contest. In this contest the score for each successful shot depends on both the distance	MPBlec
	from the basket and the player's position. The ball is shot N times, successfully. You are given an array A containing the distance of a player from basket for N shots. The index of array represents the position of the player. Score is calculated by	W
LEW BIC	multiplying the position with the dictance from the backet	.<
KEM.	Your task is to find and return an integer value, representing the maximum possible score you can achieve by choosing a contiguous subarray of size K from the given array.	,SEDARTE
2	Note:	
:CSEOA?	* A subarray is a contiguous part of array.	PATechic
	* Assume 1 based indexing.	3876
xec's	* The array contains both negative and positive values.	
MBleck	* Assume the player is standing on a cartesian plane.	OAZTEM
	Input Format	OAL
3E0A2 TE	- input1:An integer value N representing the number of shots made by the player	,(
SEON	- input2 : An integer K representing the size of subarray	iechicski
	- i nput3 : An array of integers	(0)
